

Energy & Carbon Policy

TSPL acknowledges the global concern on climate change and recognizes that concerted and sustained global action is required to address climate change risks and to adapt to their potential impacts. The Company is committed to this effort through its own progressive energy and carbon program which forms an integral part of its vision for sustainable development.

TSPL strives to:

- Comply with national and regional environmental regulation.
- Adopt the best available technology and operate the power plant at highest possible efficiency so that the use of coal/MW of electricity can be minimized.
- Adopt and maintain best practices on carbon and energy management and minimizing greenhouse gas emissions throughout its operations. The Company continues to measure the direct energy usage and maintain year on year efforts to reduce energy consumption.
- Increase benefits of process improvements and technology advancements
- Install adequate equipment to monitor, measure and analyses emission.
- Develop and maintain adequate greenbelt inside plant boundary.
- Implement ISO 50001 Energy Management System.
- This policy will be reviewed regularly.
